We would like to introduce AUTOPULIT as one of the leading European producers of automatic and CNC machines for polishing, belt grinding, deburring and micro-finishing metal pieces for many sectors of industry.

In particular we are pleased to introduce you to our wide range of machines for aluminium alloy wheel finishing, one of the applications within our large experience in the automotive sector.

Autopulit has developed a specific software for abrasive belt grinding and polishing, easy to program by means of a menu driven interactive system which does not require any programming or computer science knowledge. It incorporates automatic buff wear compensation (axes X, Y, Z, simultaneously), verifying the movements, self-diagnosis and teleservice through internet. Based on an industrial computer with Pentium processor, on a Windows XP environment, permitting integration in the computer network of the end-user.

Complete installations for the internal and external polishing and bright finishing of truck/bus wheels including automatic inlet/outlet conveyor table, robot for loading and unloading, enclosure room and dust extraction equipment.

8 CNC head rotary transfer machine with 42 interpolated axes for polishing aluminium alloy wheels

8 head automatic rotary transfer polishing machine for aluminium alloy wheels

4 CNC head rotary transfer polishing machine with 21 interpolated axes for external polishing of aluminium alloy truck wheels

8 head automatic rotary transfer polishing machine for aluminium alloy wheels

5 CNC head rotary transfer polishing machine with 26 interpolated axes for internal polishing of aluminium alloy truck wheels.
